

Supporting Recovery from Opioid Addiction through Autobiographical Game Design: Preliminary Findings

Sandra Danilovic, PhD
Assistant Professor, Game Design & Development

Kenny Chee, PhD Student, Community Psychology

Wilfrid Laurier University

Research Details

Funding:

Social Sciences and Humanities Research Council—Insight Development Grant
Wilfrid Laurier University Equipment Grant

Community Partners:

Grand River Community Health Centre (Brantford)
CMHA Hamilton and Keeping Six Collective (Hamilton)

Research Team:

12 total: 3 faculty, 5 graduate students, and 3 undergraduate students

Disciplines:

- Game Design & Development
- Social Work
- Social Justice and Community Engagement
- Youth and Children's Studies
- Community Psychology
- Music Therapy
- Inclusive Design

Game Jams for Research

- Game jams invite people to make a game from scratch in 1-3 days
- Game jams are festive and fun
- Game jams are playful spaces

Creating Inclusive Game Jams

- Creating a welcoming, accessible, and anti-oppressive space for game jammers

GAMERella & TAG
present

INCLUSIVE GAME JAM GUIDE

Created by
Gina Hara, Desirée de Jesus

Study background

The opioid epidemic is a persistent public health problem across Canada. Opioid-related deaths have almost doubled during the COVID-19 pandemic which has exacerbated this crisis by creating access barriers to social services for people using drugs (Gomes et al. 2021, 3).

Brantford, Ontario has the second highest rate of opioid poisoning in Canada (Canadian Institute for Health Information 2018, 22).

Research Questions

RQ1: How do participants experience autobiographical game design during a game jam?

RQ2: How do participants experience the learning process of game design and its diverse tools?

RQ3: How do participants make sense of their lived experiences with opioid addiction through game design—ideation, narrative and character design, interaction design, and coding?

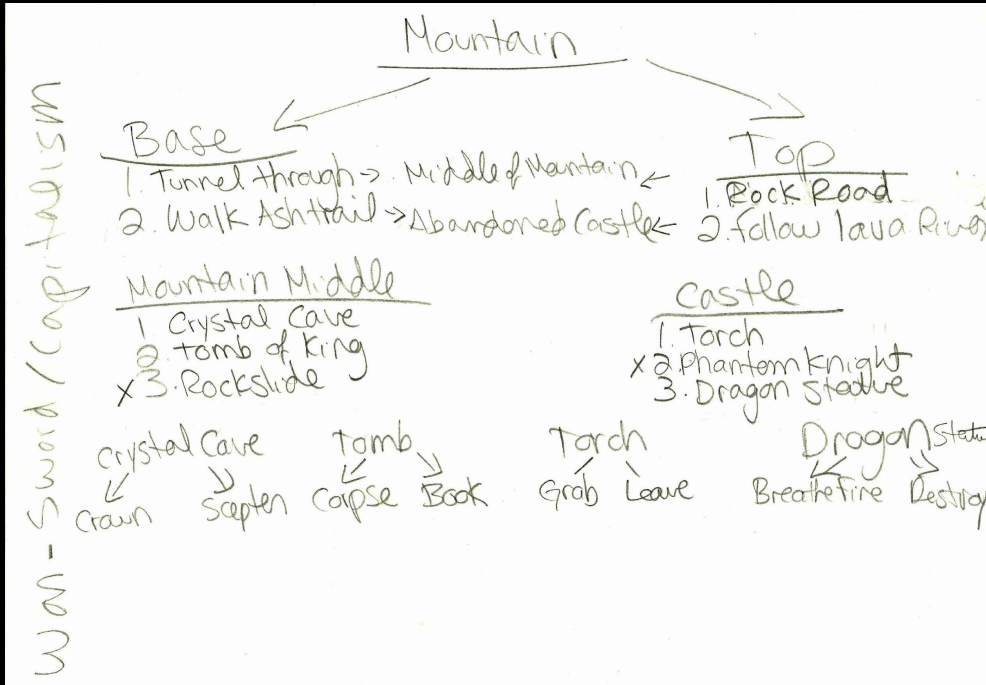

Image: Jammer ideation sketch

Population: Adults living with or recovering from opioid addiction, ages 18 +

Object of study: expressing life stories through digital game design

Study objective: to examine the potential of digital games as sense-making tools and game jams as creative spaces to support recovery

Research Design

Game Jam methodology:

participatory-action approach and data generation; game jamming using Twine, Scratch, Bitsy and Makey Makey software

Context: Three two-day game jams; Two in Brantford & One in Hamilton

Qualitative research methods:

semi-structured interviews, collection of processual artifacts such as sketches, doodles, multimodal journaling (“doodle, draw, sketch, or write!”)

Research Design

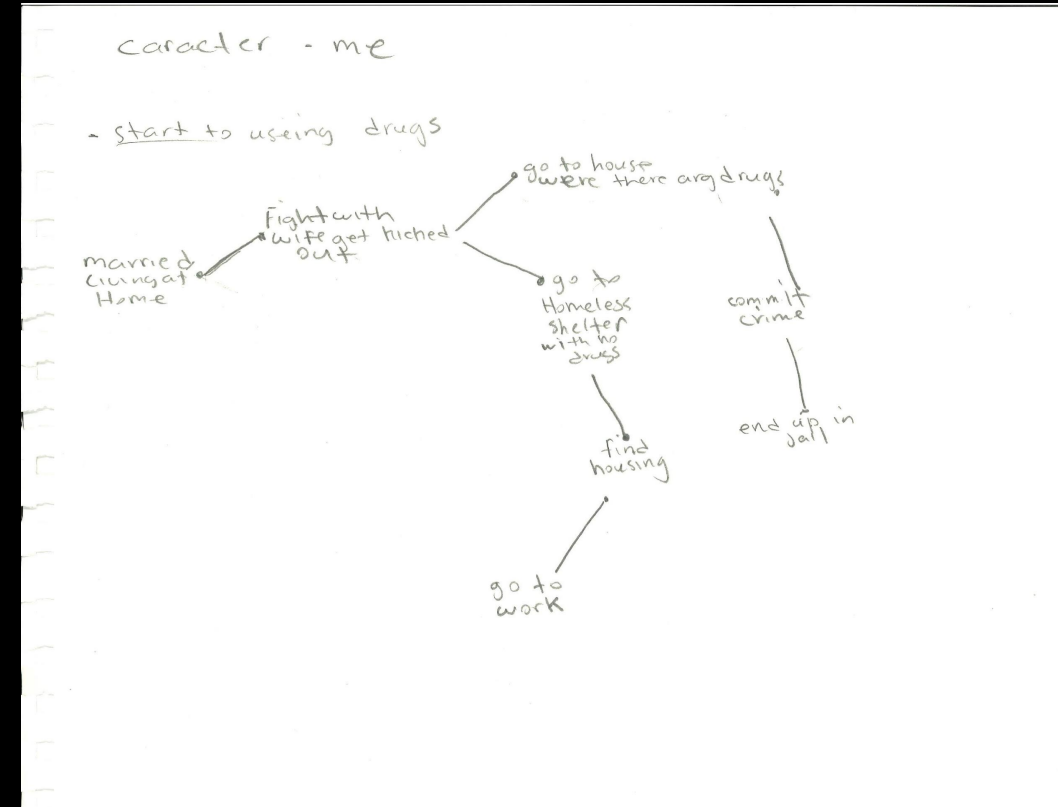

Image: Jammer ideation sketch

The sun comes up, you open your eyes in your bedroom and get ready to start your day...

You have three choices

- Recovery
- Social Acceptance
- Addiction Year 1
- Addiction Year 3
- Addiction Year 10

Data Generation and Collection during Game Jams

Demographic Data

21 game jammers across three game jams

Majority of the participants between 35-39 of age ($N = 6$), followed by 30-34 of age ($N = 4$).

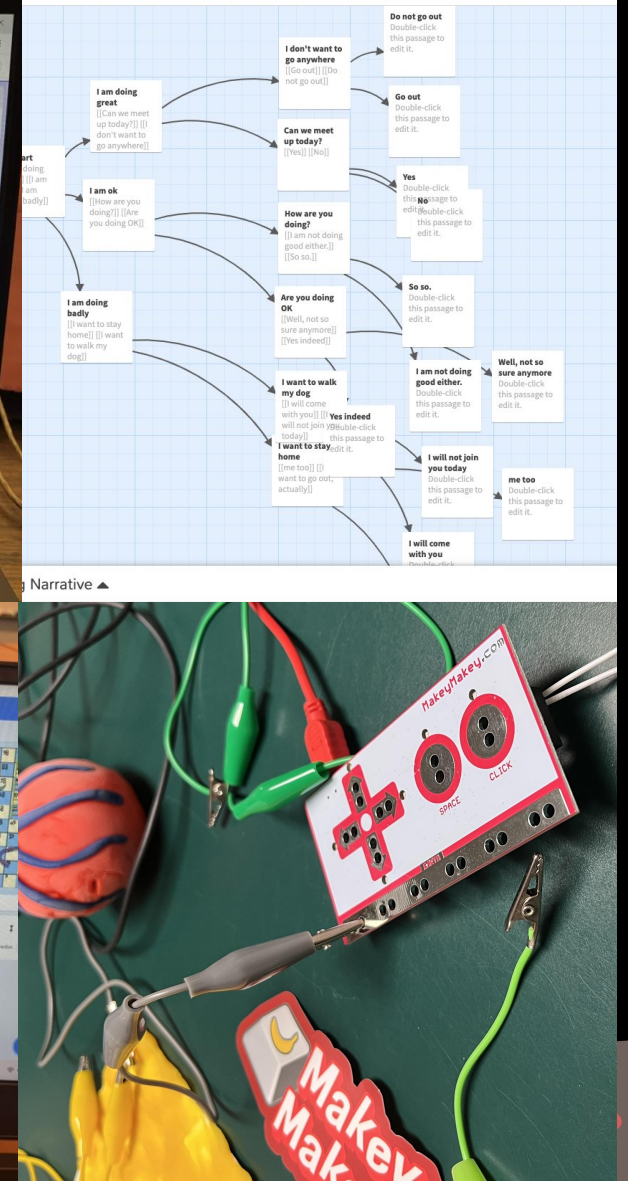

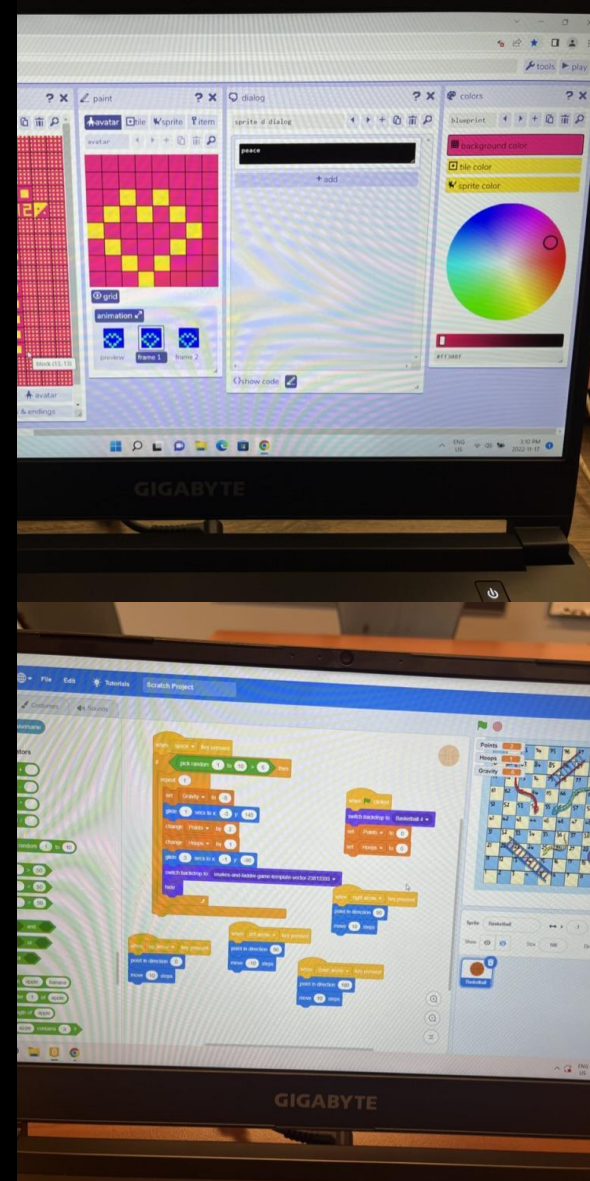

Ethnicity: 15 identified as White, 4 Indigenous (3 First Nations), and 1 Black

Gender: 11 men, 8 women, 1 gender fluid

Sexual orientation: majority identified as heterosexual ($N = 17$), 1 identified as gay, 1 identified as pansexual, and 1 queer

Teaching game design to beginners: best practices

- Make games simple
- Harness pre-made art and music
- Accept support by game design mentors (undergrad RAs)

| | |
|------------|---|
| Game Jam 1 | 8 participants (all in recovery) 5 Twine & 3 Scratch games |
| Game Jam 2 | 6 participants (5 in recovery) 3 Scratch games |
| Game Jam 3 | 7 participants (all in recovery) 6 Bitsy games |

Preliminary Observations

1. The process of making a game offers a level of reflection and introspection that radically differs from other forms of expression

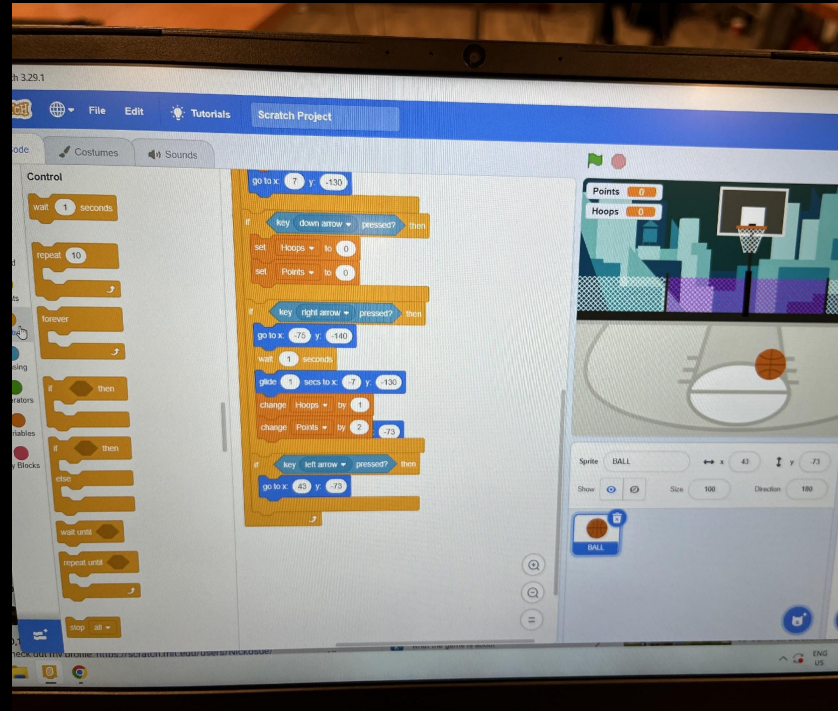

Madison*: "I really think that (telling a personal life story through a game) has opened my eyes to myself a lot more than just sitting down or reading or talking".

* Pseudonym

Self-Making

Collective-Making

2. The Game Jam is a space for computational creativity that contrasts 12-step programs, methadone clinics, and other medicalized venues for addiction management

Journal
I really enjoyed the game jam!
It was a nice break from
my normal day-to-day. I'm not that
great at computers but I think
I did really good! My story is
a little humorous but serious
too. I didn't do needles or
steal from mom or beg on streets.
but I did things just as bad.
This shows a day in the life.
wake up sick, and do what you
need to get well.

Metaphor-Making

Preliminary Observations

Ree*: "losing yourself in any fantasy is a good way to process reality"

* Pseudonym

3. Some jammers harnessed metaphor to represent their lived experiences. Experiences rendered include navigating the healthcare system, living in poverty, and grappling with addiction.

Image: Jammer sketch

Game Design Process

Metaphor-Making

Barb's game is called **"Shooting Hoops Going Back and Forth"** and symbolizes her difficulties getting treatment for addiction and other chronic conditions while navigating the healthcare system

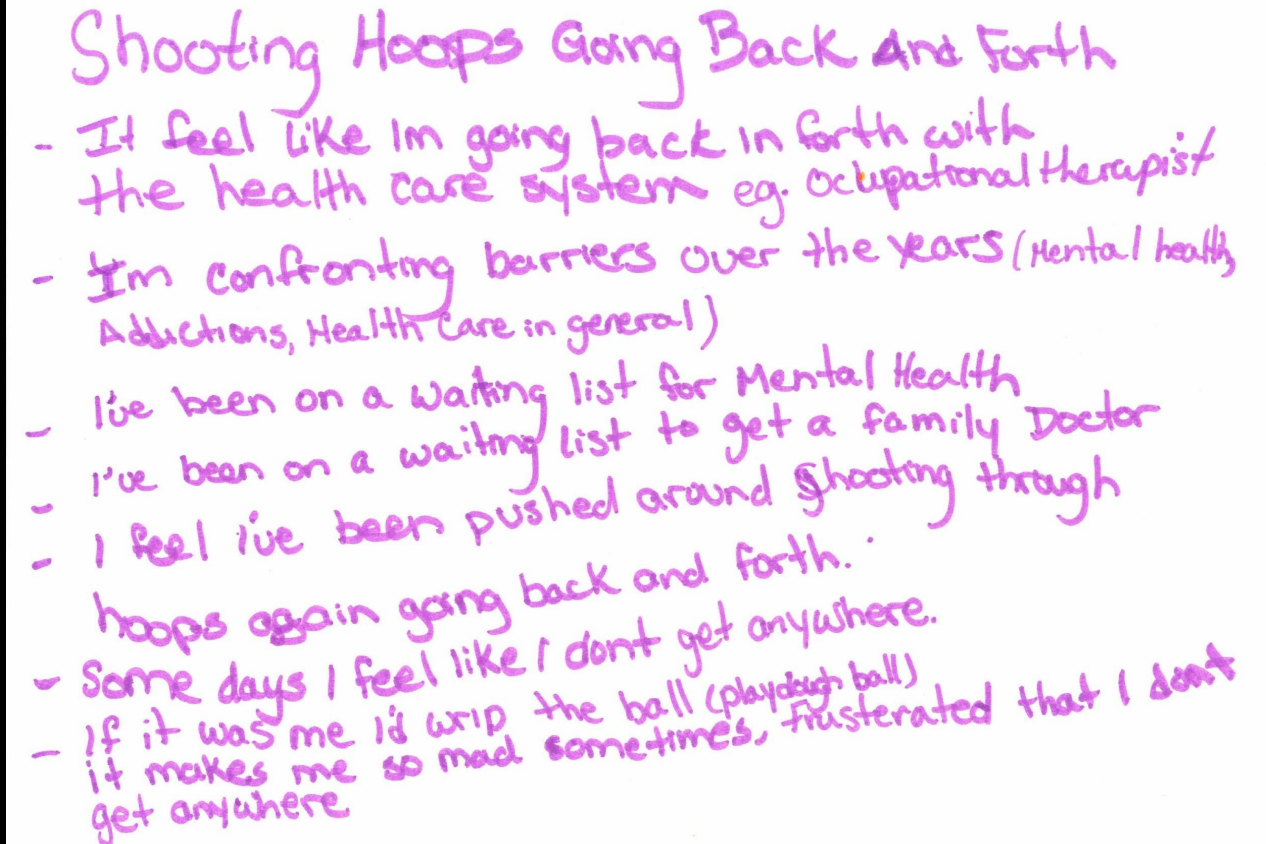

- 
- Shooting Hoops Going Back and Forth
- It feel like Im going back in forth with the health care system eg. Occupational therapist
 - Im confronting barriers over the years (Mental health, Addictions, Health Care in general)
 - I've been on a waiting list for Mental Health
 - I've been on a waiting list to get a family Doctor
 - I feel i've been pushed around shooting through hoops again going back and forth.
 - Some days I feel like I dont get anywhere.
 - If it was me I'd wrp the ball (playdough ball) it makes me so mad sometimes, frustrated that I dont get anywhere

Image: Barb's reflections on her game

Image: Barb's Makey Makey game controller (basketball court and basketball made of Play-Doh material)

4. Digital game design empowers adults recovering from addiction to take up coding

Computation-Making

Doodle, Draw, Sketch or write!

1. what did you learn about yourself through the process of making your game?

I LIKE CODING

I Have a Creative Mind

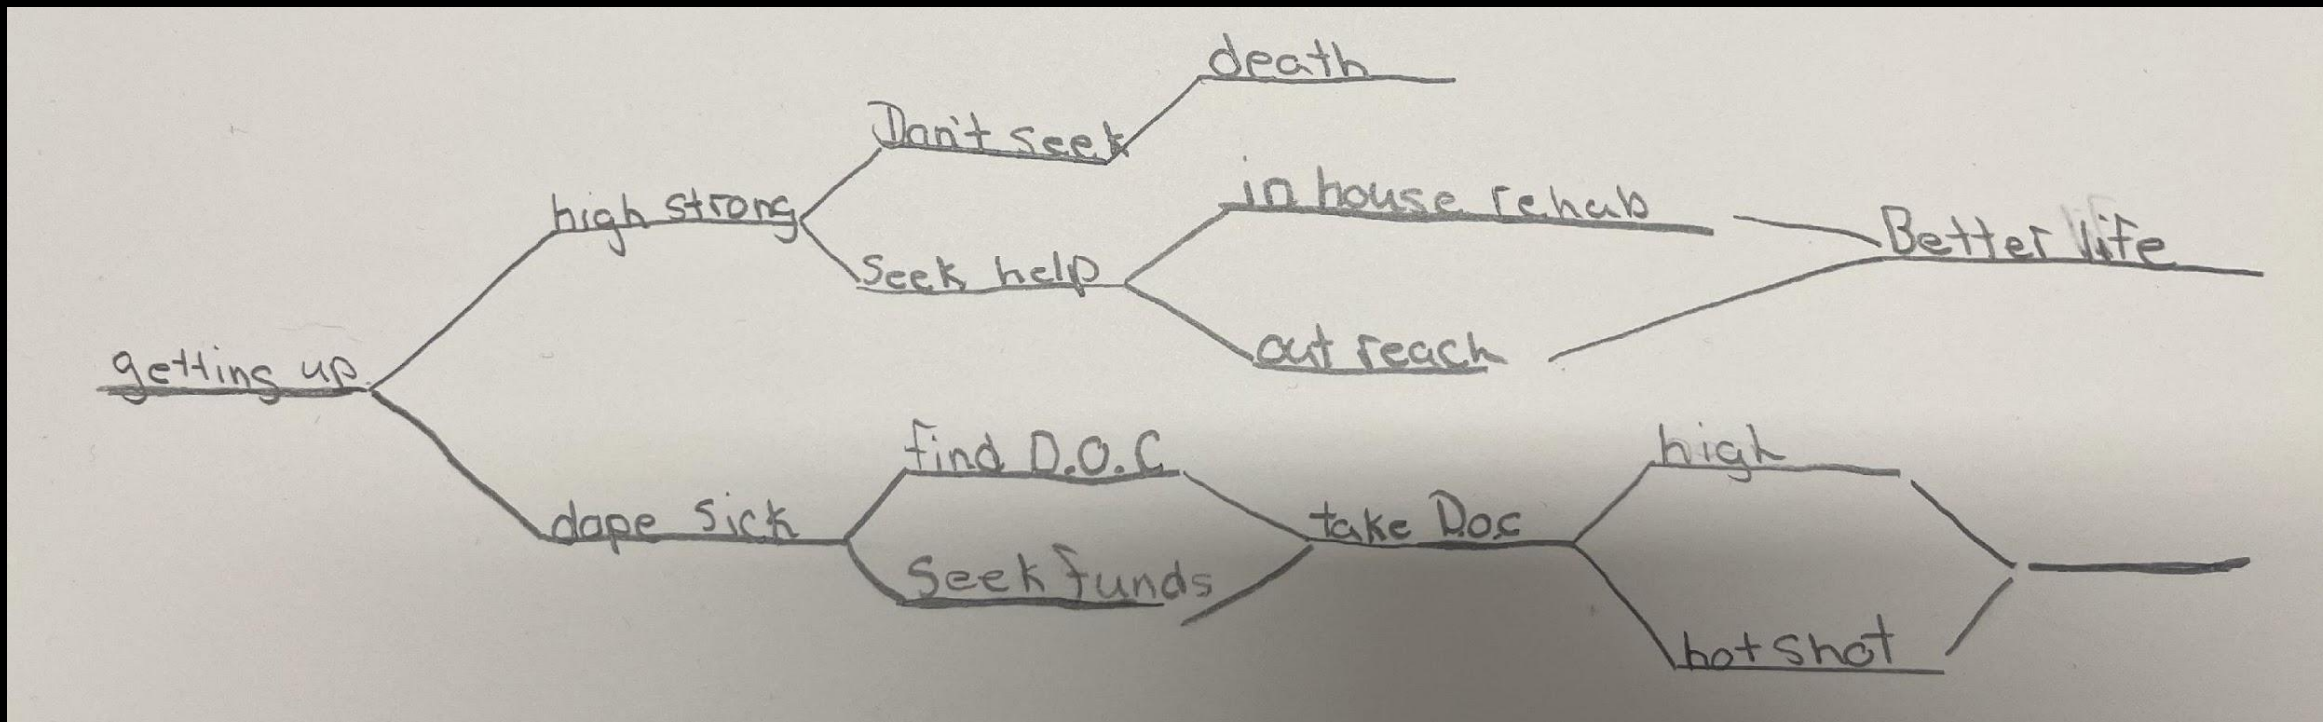

I can still learn at my age with my disabilities.

Brings back bad memories and boggles my mind a bit. Makes me hopeful to help others.

I learned that I am Capable of making a game, Simple as it is.

Images: jammer doodles, sketches, reflections

Games enable the simulation of
decision-making processes

Computation-Making

Photo: Jammer sketch of branching narrative

5. Digital game design and game jams may be beneficial to adults in later stages of recovery from opioid addiction – could be integrated into recovery houses.

Preliminary Observations

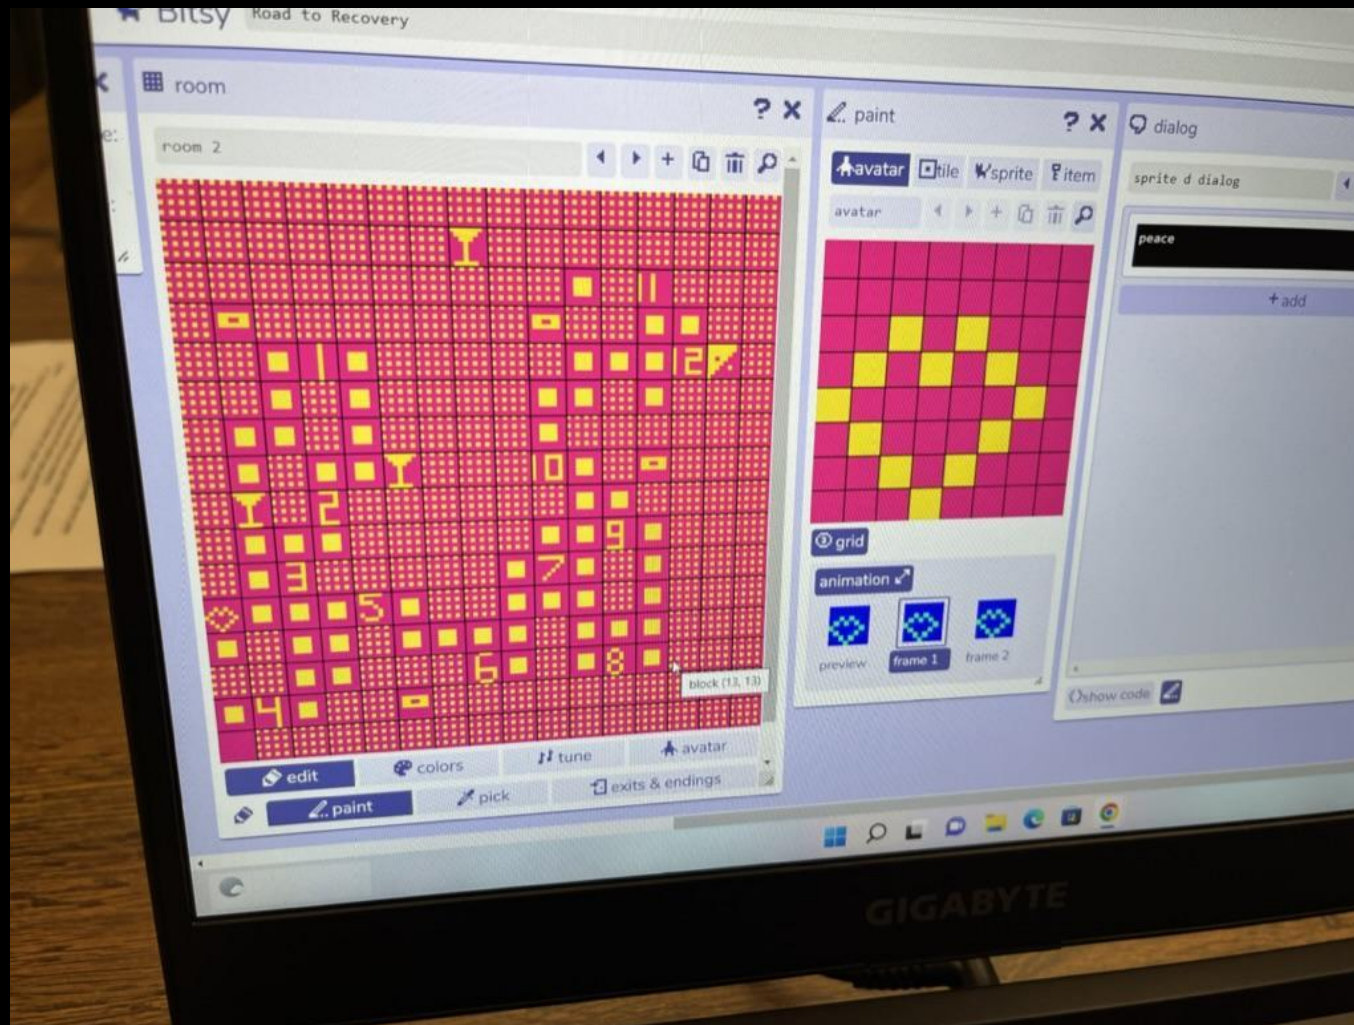

Noah*: “I think (game jamming) could be a good activity for (a) recovery home/treatment center after someone's had a couple of months (of recovery). But people in early recovery, I'm not sure if they're going to get as much out of it.”

* Pseudonym

Implications

- Game jams champion marginalized voices and give decision-making power to underserved communities while making research fun and enjoyable.
- Life storytelling through digital games has the potential to build empathy with the public and challenge preconceived ideas about addiction
- Giving insight to policymakers addressing structural outcomes related to the opioid crisis.

Games: Scratch, Twine, and Bitsy

| | Game Jam Day 1 | Game Jam Day 2 |
|-------|--|--|
| 08:30 | Setting up Room with snacks, coffee, game design materials | |
| 09:00 | Registration and Consent Form Signing: Sandra, Alia, Catherine | Implementation Jam # 1: gameplay |
| 09:30 | Introductions of the Game Jammers: Sandra (throw toy in a circle) | " " + introduction of Reenie |
| 10:00 | Workshop on Autobiographical Games: Sandra; Alia's presentation of Obstacles (5 min) | Implementation Jam #2: audio and music (Reenie and Rianna) |
| 10:30 | Workshop on Twine: Catherine | 15 min BREAK (walk around, snacks) |
| 11:00 | Workshop on Scratch and Makey Makey: Daniel | Implementation Jam #3: keep working on game |
| 12:00 | Lunch and musical interlude: Rianna (Zoom) | Lunch and musical interlude: Reenie |
| 12:30 | Ideation Jam #1: Journaling & Reflecting. Creating an elevator pitch (2-sentence synopsis) for main mechanics and story; PLOT GRAPH SHEET 3-plot points (beginning, middle, end) | Playtesting and Debugging #1 |
| 13:30 | Presentation of elevator pitches (voluntary) | Playtesting and Debugging #2 |
| 14:00 | Ideation Jam #2: Audio-visual elements: sketches, doodles, colour palette | Group Discussions (visual journaling interviews) |
| 15:00 | Break 15-30 minutes - get up, get a snack, walk around | Takeaways and Wrap-Up |
| 15:30 | Implementation Jam #1: gameplay and/or visuals (possibility: cut down to 45 min) | In-depth 1-2 hr interviews with participants |
| 16:30 | END | END |

Challenges

1. Recruitment challenges due to the COVID-19 Pandemic
2. Interdisciplinary challenges
3. Challenges of doing community-engaged research in universities
4. Game jams are logistically difficult to organize and implement when working with vulnerable and high-risk populations (safety protocol planning needed, the ethics of collaboration)
